

CONSTRUCTING KNOWLEDGE

The Konig Group is composed by companies who have been in business within the veterinary and environmental health markets for more than 35 years.

Their business insight, expansive regional policy, sound commercial practices, quality of their products, constant innovations in new developments and, above all, their human resources have enabled the **Konig Group** to warrant growth during all these years.

_MISSION

To meet and fulfill the needs and expectations of our Customers, by producing high quality products, using technology and processes that protect the environment and respect ethical and moral values in our industrial and commercial practices.

_VISSION

To consolidate its position at an international level and as a laboratory manufacturing high-quality product.

_OUR MAIN CORPORATE VALUES ARE SUMMARIZED BELOW:

Our people and teamwork.

Continuous innovation in processes and products.

Quality.

Flexibility in adaptation within unknown scenarios.

Solidarity and environmental care.

KONIG GROUP

- **LABORATORIOS KONIG S.A.**
 Manufacture of products for domestic pets and production animals.
 Sale of these products on the local market and their export to Latin-American countries

- **BINKA S.A.**
 Manufacture and sale of products for domestic pets at supermarkets
 Manufacture and sale of products for environmental pests control for domestic and industrial use.

- **KONIG DEL URUGUAY S.A.**
 Sale of products for pets and productive animals to veterinary shops.

- **BINKA URUGUAY S.A.**
 Sale of Products, for environmental pests control, for domestic and industrial use.

- **KONIG DO BRASIL LTDA.**
 Sale of products for pets and productive animals to veterinary shops, agricultural and livestock producers and distributors.

Sale of Products, for domestic and industrial use, for environmental pests control

- **SPVET LTDA.**
 Distributor for the San Pablo and Great San Pablo area, owned by Konig do Brasil Ltda.

- **DOTTIKON S.A.**
 Administration of invention patents

- **FOREIGN COMPANIES**
 Owner of trademarks and sanitary registrations, assigned to local distributors.

PLANTS AND WAREHOUSES

Sao Paulo Plant: 2700 M2

Production of vitamin cores, antibiotics, coccidicides, nutritional improvement products and mineral concentrates.

Address: Rodovia Castelo Branco Km 68.5, Mairinque, Sao Paulo, Brazil

Avellaneda Logistics Center: 3300 m2

Stock of finished products and raw materials.

Address: Belisario Hueyo 210, Avellaneda, Buenos Aires, Argentina

Konig Plant: 2000 m2

Injectable products, tablets, hormonal products, antiparasitics, anesthetics, antibiotics and mineral supplements

Address: Av. Rivadavia 719, Avellaneda, Buenos Aires, Argentina.

Chivilcoy Plant, Buenos Aires Province, Argentina: 1850 m2

Production of Sprays

Address: Route 5, Km 160, Industrial Park, Chivilcoy, Bs. As., Argentina

Binka Plant: 1800 m2

Production of pesticides and healing substances.

Address: Méjico 1060, Pineyro, Bs. As., Argentina

Uruguayan Project

An investment of U\$S 4.600.000 has been planned for the year 2014 in order to build a 3000 m2 plant, to be located on a 9-hectares plot near the Carrasco Airport, at Montevideo, Uruguay.

The plant will be destined to the production of large volumes of injectable and oral antiparasitic products for cattle, sheep and pigs.

WWW.KONIGLAB.COM

ANTIINFLAMMATORY

ANALGESICS

WWW.KONIGLAB.COM

APLONAL 5%

Maximum potency non-steroid antiinflammatory, analgesic and antipyretic agent.

+

FOR USE IN

+

DISTRIBUTION COUNTRIES

Injectable sedative, myorelaxant, analgesic and anesthetic agent for small and large animals.

FORMULA

Each ml contains: xylazine hydrochloride 20 mg;
excipients and vehicle q.s.

INDICATIONS

- **Horses:** Colic and inflammatory injuries of the locomotive system.
 - **Cattle:** Supportive treatment in acute infectious diseases, calf diarrhea and fallen cow syndrome.
 - **Pigs:** Treatment of the metritis-mastitis-agalactia syndrome.
- Post-surgical and post-traumatic relief in all species

ADMINISTRATION AND DOSAGE

- **Horses:** Apply 1 ml/45 kg weight (1.1 mg flunixin/kg) by IM or IV route, every 24 hours up to a maximum of 5 consecutive days. Use the IV route for colics; the treatment can be repeated up to 3 times at 30 minute intervals.
- **Cattle:** Apply 2 ml/45 kg weight (2.2 mg flunixin/kg) up to a maximum of 5 days. For neonate diarrhea, 2 to 3 ml/calf, 1 to 2 applications.
- **Pigs:** Apply 2 ml/45 kg weight (2.2 mg flunixin/kg), every 24 hours during 3 days.

ANESTHESIC

MYORELAXANTS

WWW.KONIGLAB.COM

KENSOL

Myorelaxant and anesthetic sedative.

FORMULA

Each ml contains: xylazine hydrochloride 20 mg;
excipients and vehicle q.s.

INDICATIONS

Sedative, myorelaxant, analgesic and anesthetic
for use alone or in association with preanesthetics
or anesthetics for contention maneuvers or major
or minor surgery in all domestic animals.

FOR USE IN

DISTRIBUTION COUNTRIES

SEDOMIN

Sedative, myorelaxant, analgesic and anesthetic agent for horses and cattle. Concentrated dose.

+

FOR USE IN

+

DISTRIBUTION COUNTRIES

Injectable sedative, myorelaxant, analgesic and anesthetic agent for horses and cattle.

FORMULA

Each ml contains: xylazine (as hydrochloride) 100 mg, excipients and vehicle q.s.

INDICATIONS

Diagnostic procedures, presurgical sedation, orthopedic and odontological procedures and minor surgery in horses. Transportation, minor and major surgery in cattle.

ADMINISTRATION AND DOSAGE

■ **Horses:** 1 ml/100 kg weight, via IV or 2 ml /100 kg weight, via IM. Administration of the indicated dose causes sedation for a period of 1 to 2 hours, with analgesia during the first 15 to 30 minutes.

■ **Cattle:** 0.05 - 0.1 ml/100 kg weight, via IM or IV for minor surgery, sedation or transportation.

Onset of action at 30 seconds and lasts, approximately, 2 hours. For major surgery, 0.2 ml/100 kg, via IM or IV; duration of effect 2 to 4 hours.

Sedomin (0.1 ml/100 kg) can also be combined with Vetanarcol (10 ml/100 kg). As complement of local anesthesia, **Sedomin** is used at the same dose indicated for sedation, concurrent with locally applied procaine or lidocaine. As preanesthetic for general anesthesia, **Sedomin** is used at the same dose indicated for sedation. Due to the depression additive effect on the central nervous system, only 1/2 to 1/3 of the barbituric dose must be administered to achieve an adequate anesthesia.

VETANARCOL

Safe anesthetic. Cardiovascular stimulant. No effects on respiratory system.

Dissociation acting general anesthetic for domestic and wild animals. Ideal for emergencies and traumatisms.

FORMULA

Each ml contains: ketamine (as hydrochloride) 50 mg,
excipients and vehicle q.s.

INDICATIONS

Vetanarcol is an anesthetic indicated for premedication,
induction or maintenance use, alone or associated with major
and minor tranquilizers, sedatives, narcotics, analgesics and
other anesthetics for all kinds of domestic and wild animals.

BTK 35

Cure and prevention of keratoconjunctivitis. Total acting bactericide, fungicide and viricide. Antiinflammatory.

Topical administration antibacterial and antiinflammatory agent for small and large animals.

FORMULA

Each 100 g of concentrate: argentic sulfadiazine 0,85 g%;
Oxytetracycline hydrochloride 5,00 g%; hydrocortisone
acetate 0.29 g%; excipients q.s.f.

INDICATIONS

For the prevention and treatment of infectious
keratoconjunctivitis in cattle, as well as for the prevention
and treatment of bacterial inflammation and infection
of traumatic and surgical wounds in horses.

FOR USE IN

DISTRIBUTION COUNTRIES

KURAMICINA L.A

Sustained action. Five-day bioavailability. Just one application is enough.

+ FOR USE IN

+ DISTRIBUTION COUNTRIES

Immediate and long acting injectable antibiotic.

FORMULA

Each 100 ml contains: amphoteric base oxytetracycline 20 g, excipients and vehicle q.s

INDICATIONS

For the prevention and cure of general infectious diseases, caused by Gram positive and Gram negative bacteria, micoplasmas, rickettsias and clamydias in cattle, sheep and pigs. Very effective in keratoconjunctivitis (intrapalpebral) and for the treatment of campylobacteriosis in bulls.

ADMINISTRATION AND DOSAGE

Apply 1 ml per each 10 kg weight, exclusively by IM. In less than 10 kg suckling pigs, apply a total of 1 ml, via IM or SC. Both for preventive and curing treatments, the frequency is just one application except if the disease is sufficiently acute to justify a second application within 3 to 5 days.

■ **Precautions:** According to the volume to be administered, the application must be performed in two or more injection sites, never exceeding the following volumes in each site: 20 ml in cattle, 5 ml in sheep and 10 ml in pigs.

ANTIDIARRHEIC PRODUCTS

WWW.KONIGLAB.COM

DIAFIN N

A single application stops diarrhea. Eliminates pathogen enterobacteria.

FOR USE IN

+

DISTRIBUTION COUNTRIES

Injectable intestinal motility modulator antibiotic and antidiarrheal for small animals.

FORMULA

Each ml contains benzetimide hydrochloride 0.165 mg;
enrofloxacin 25 mg; excipients and vehicle q.s.

INDICATIONS

Treatment of complicated bacterial or viral diarrheas
in dogs and cats.

ADMINISTRATION AND DOSAGE

Apply 1 ml per each 10 kg weight, via SC or IM to both species. In most cases, a single application is sufficient to cure diarrhea. Treatment can be repeated at 24 or 48 hours.

BACTROFLAY POUR ON

External Antiparasitic. Excellent Residual Power

+
FOR USE IN

+
DISTRIBUTION COUNTRIES

External pour-on antiparasitic without restriction as regards milk and minimum restriction as regards beef. Excellent residual power.

FORMULA

Contents per 100 ml. Ethion 15 grams;
Cypermethrin 5 grams; Excipient and Vehicle q.s.

INDICATIONS

Control and treatment of infestations by Haematobians
irritans (horn fly) in bovines.

ADMINISTRATION AND DOSAGE

Apply along the dorsal midline from withers to rump. The interval between applications should be 50 days.

■ **Calves weighing:** 100 to 200 K.: 5 mL. // 200 to 400 K.: 10 mL. // over 400 K.: 20 mL.

WAITING TIME:

■ **Milk Bovines:** 6 hours

■ **Beef Bovines:** 6 days

The restriction applies because of Cypermethrin, in fulfillment of Senasa Resolution N° 1343/93

BACTROFLY TAGS

External Antiparasitic. Excellent Residual Power

External antiparasitic without restriction as regards beef and 48 hours as regards milking period.

FORMULA

Ethion 40g %, Excipients q.s. 100 g.

INDICATIONS

Control and treatment of infestation due to horn fly
in beef and milk bovines.

ADMINISTRATION AND DOSAGE

Place one tag (caravana) on each animal. Replace the tags every 4 months, once this period has been completed, removal is recommended in order to avoid the possible appearance of resistant populations because the flies are being exposed to sub-lethal doses. Place the tags using an applicator pincers that should be disinfected with an antiseptic solution before being used.

WAITING TIME:

No restriction in beef cattle.

Milking waiting period in Argentina: 48 hours.

FOR USE IN

DISTRIBUTION COUNTRIES

RICOVERN

Wide spectrum antiparasitic: adulticide, larvicidal and ovicidal. No irritating effect. Maximum bioavailability.

Internal, injectable, wide spectrum antiparasitic for bovines
(Wide spectrum gastrointestinal and lung antiparasitic).

FORMULA

Contents per each 100 mL: Ricobendazol 15 grams;
excipient and vehicle q.s.

INDICATIONS

Indicated for the treatment of infestations by nematodes:
Haemonchus spp., Trichostrongylus spp., Strongylus spp.,
Ostertagia spp., Nematodirus spp., Cooperia spp,
Bunostomum spp. and Dictyocaulus spp. in cattle.

ADMINISTRATION AND DOSE

Apply subcutaneously in front of, or behind, the shoulder. The recommended dose is 1 mL for each 40 K. of weight.
Do not inject more than 10 mL per point of application.

RESTRICTION PERIOD

- **Milk cattle:** 3 days
- **Beef producing cattle:** 14 days.

Total spectrum paste anthelmintic for horses with ovicide, larvicide and adulticide action.

FORMULA

Each 100 g contains: mebendazole 12.5 g, closantel 11.8 g and excipients, q.s.

INDICATIONS

Treatment of Parasitosis due to *Gasterophilus* spp., *Parascaris equorum*, *Oxyuris equi*, *Habronema muscae*, *Trichostrongylus axei*, *Trichonema* spp., *Triodontophorus* spp., *Strongylus* spp., *Strongyloides westeri* and *Fasciola hepatica* in horses.

ADMINISTRATION AND DOSAGE

Oral administration of 26 g (one syringe)/500 kg weight, every three months. This drug can be administered to pregnant mares and foals.

PHYSIOLOGICAL CICATRIZATION PRODUCTS

WWW.KONIGLAB.COM

KURADERM PLATA

Physiological Healing Agent. Keratoplastic. No formation of crust. Accidental or surgical wounds.

Antimicrobial; healing; astringent and high adherence hemostatic agent, for topical use in small and large animals.

FORMULA

100 g of concentrate contains: Argentic sulfadiazine 1.25 g;
neomycin base (as sulfate) 5.4 g; aluminum 8.33 g
and excipients q.s. Propellant: Butane-propane.

INDICATIONS

Prevention and treatment of infectious processes in wounds.
Hemostatic effect. Healing of wounds, eschars,
burns and ulcers.

ADMINISTRATION AND DOSAGE

Shake before applying. After cleansing the area to be treated, spray a thin layer on same from a distance of approximately 10 cm ensuring penetration inside the wound. Repeat once a day until the wound heals.

FOR USE IN

DISTRIBUTION COUNTRIES

BACTROVET PLATA AM

High adherence hemostatic, healing and antimyasic agent.

Topical use, high adherence, healing, antimyasic, antimicrobial and hemostatic agent.

FORMULA

Each 100 g of concentrate contains: Argentic sulfadiazine 0.1 g; aluminum 5 g; DDVP 1.6 g; cypermethrin 0.4 g and excipients q.s.

INDICATIONS

Prevention of bleeding, infection and myiasis in traumatic and surgical wounds. Curing treatment of ulcerous skin myiasis, with larvicide and healing stimulant effect.

For use in small and large animals.

ADMINISTRATION AND DOSAGE

Shake before using. Spray abundantly on the wound or myiasis at an approximate distance of 10 cm, ensuring penetration inside the wound. Apply once daily until healing.

Intensive high-efficacy de-wormer Paste

+

FOR USE IN

+

DISTRIBUTION COUNTRIES

Antimiasic, repellent, bactericide, antifungal, wound healing, epithelization and hemostatic agent.

FORMULA

Contents per each 100 grams: silver sulphadiazine. 0,1 grams;
Aluminium, 5,0 grams; Imidacloprid 0,7 grams; cypermethrine
3,0 grams; excipient q.s.

INDICATIONS

Treatment of any type of wound in any species. Treatment and prevention of worms (bicheras) in surgical interventions such as castration, dehorning, tail docking, navels of calves, cracks in hooves and wounds of any origin. Wounds in general.

ADMINISTRATION AND DOSAGE

Place the paste in layers on the area to be treated, ensuring penetration of the product into the wound. Also apply around the wound, forming a 5-cm. halo. The number of applications depends on the type of wound and environmental conditions. The silver color indicates that the animal has been treated, The number of applications, as preventive action, depends on the type of wound and environmental conditions, but in the case of navel worms (bichera). a single application is recommended within 24 hours after birth. In the case of castration wounds: 2 separate applications with an interval of 72 hours are recommended.

KOBRA

High adherence, healing and antimyasic agent.

Topical use, high adherence, healing, antimyasic agent.

FORMULA

Each 100 g of concentrate contains: DDVP, 1,26 g;
Cypermethrin, 1,30 g and excipients q.s.

INDICATIONS

Prevention of bleeding, infection and myiasis in traumatic and surgical wounds. Curing treatment of ulcerous skin myiasis, with larvicide and healing stimulant effect.

For use in small and large animals.

ADMINISTRATION AND DOSAGE

Shake before using. Spray abundantly on the wound or myiasis at an approximate distance of 10-15cm, ensuring penetration inside the wound. Apply once daily until healing. Recommended in navel, an application within 24 hours of birth, in castration wound two separate applications for 72 hours.

In chronic cases alternate a 3-day treatment with 4 days without medication, over a maximum period of 3 months.

ANESTHESICS

MYORELAXANTS

WWW.KONIGLAB.COM

KENSOL

Myorelaxant and anesthetic sedative.

+
FOR USE IN

+
DISTRIBUTION COUNTRIES

Injectable sedative, myorelaxant, analgesic and anesthetic agent for small and large animals.

FORMULA

Each ml contains: xylazine hydrochloride 20 mg;
excipients and vehicle q.s.

INDICATIONS

Sedative, myorelaxant, analgesic and anesthetic for use alone
or in association with preanesthetics or anesthetics
for contention maneuvers or major or minor surgery
in all domestic animals.

ADMINISTRATION AND DOSAGE

- **Cattle:** 0.25-0.5 ml/100 kg, via IM or IV, for minor surgery, sedation or transportation purposes. Onset of action at 30 seconds for a duration of, approximately, 2 hours. Major surgery: 1 ml/100 kg, via IM or IV, with a 2 to 4 hour duration of effect. Kensol (0.5 ml/100 kg) can also be combined with Vetanarcol (10 ml/100 kg).
- **Horses:** 3-10 ml/100 kg for sedation and light anesthesia, via SC, IM or IV. Duration of effect: between 15 and 30 minutes. For major surgery: combine 4 ml/100 kg Kensol (IM or IV) with an injection of 4-8 ml/100 kg Vetanarcol one hour later.

VETARNARCOL

Safe anesthetic. Cardiovascular stimulant. No effects on respiratory system.

FOR USE IN

DISTRIBUTION COUNTRIES

Dissociation acting general anesthetic for domestic and wild animals. Ideal for emergencies and traumatisms.

FORMULA

Each ml contains: ketamine (as hydrochloride) 50 mg, excipients and vehicle q.s.

INDICATIONS

Vetarnarcol is an anesthetic indicated for premedication, induction or maintenance use, alone or associated with major and minor tranquilizers, sedatives, narcotics, analgesics and other anesthetics for all kinds of domestic and wild animals.

ADMINISTRATION AND DOSAGE

■ **IV recommended guidance doses are:** horses: 3 to 8 mg/kg; cattle: 5 mg/kg; sheep and goats: 3 mg/kg; pigs: 5 mg/kg. ■ **IM recommended guidance doses are:** horses: 15 mg/kg; cattle: 15 mg/kg; sheep and goats: 10 to 20 mg/kg; pigs: 15 to 20 mg/kg.

It is recommended that Vetarnarcol be used associated with other drugs to obtain an anesthetic protocol adequate to each need, emphasizing its effects and minimizing its secondary adverse reactions. Vetarnarcol can be combined with xylazine (Kensol); diazepam, midazolam, acepromazine, barbiturics, propofol, narcotics, inhalatory agents and local anesthetics. The combination with other anesthetics and/or tranquilizers can reduce the required dose up to 50%, depending on the chosen protocol.

ANTIBIOTICS

ANTI-INFLAMMATORY PRODUCTS

WWW.KONIGLAB.COM

BACTROPROFEN

Bacteriostatic and bactericide antibiotic that penetrates the infected core.

Oral administration antibiotic and steroid antiinflammatory agent for dogs and cats.

FORMULA

Each tablet contains: tetracycline hydrochloride 90 mg;
chloramphenicol 90 mg; base prednisolone 2 mg
and excipients q.s.p. 300 mg.

INDICATIONS

Treatment of general infectious processes with antibiotic,
antiinflammatory and analgesic action in dogs and cats.

ADMINISTRATION AND DOSAGE

1 tablet/10 kg weight every 12 hours. Duration of the treatment will depend on the evolution of the disease and is up to the criterion of the veterinarian. Recommended duration of the treatment is not less than 7 days.

FOR USE IN

DISTRIBUTION COUNTRIES

BTK 35

Cure and prevention of keratoconjunctivitis. Total acting bactericide, fungicide and viricide. Antiinflammatory.

FOR USE IN

DISTRIBUTION COUNTRIES

Topical administration antibacterial and antiinflammatory agent for small and large animals.

FORMULA

Each 100 g of concentrate: argentic sulfadiazine 0,85 g%;
Oxytetracycline hydrochloride 5,00 g%; hydrocortisone acetate 0.29 g%; excipients q.s.f.

INDICATIONS

For the prevention and treatment of infectious keratoconjunctivitis in cattle, as well as for the prevention and treatment of bacterial inflammation and infection of traumatic and surgical wounds in horses.

ADMINISTRATION AND DOSAGE

Shake the container vigorously and spray locally over the affected area until a consistent and yellowish layer is formed. The container must be placed at some 20 to 30 cm distance from the area to be treated. In cattle keratoconjunctivitis, apply once daily on both eyes during 5 days. In the case of wounds, clean thoroughly and apply twice a day.

POLIDERM

Otic-dermic bactericide, fungicide and anti-inflammatory solution.

Antibiotic, anti-inflammatory and fungicidal solution for otic and dermatological use.

FORMULA

100 ml contain: thiabendazole 4 g; triamcinolone acetonide 0.1 g; neomicine base (as sulfate) 0.288 g and excipients q.s.

INDICATIONS

External otitis of bacterial and/or mycotic origin and localized dermatitis, with the same origin, in dogs and cats.

ADMINISTRATION AND DOSAGE

- **External otitis:** Clean the auditory canal carefully and instil 4/8 drops, twice daily.
- **Localized dermatitis:** apply on the affected part twice daily. In all cases, after the symptoms have totally disappeared, the treatment must be continued for 2/3 days more.

DISTRIBUTION COUNTRIES

Contraceptive progestogen and for dermatological use in dogs and cats.

FORMULA

Each tablet contains: megestrol acetate 20 mg,
excipients q.s.p. 280 mg.

INDICATIONS

■ **For female dogs and cats:** prevention or annulment
of oestrus, treatment of estrogen dependent tumors. (*)

(*) **For dogs:** treatment of hypersexuality; perianal gland adenomas and prostate hypertrophy. **For cats:** treatment of hypersexuality; miliary dermatitis and eosinophilic granuloma.

ADMINISTRATION AND DOSAGE

■ **Bitches: For prevention or annulment of oestrus:** one tablet per 10 kg weight per day during 8 days (normal regime) or one tablet per 10 kg weight per day during 4 days and 1/4 tablet per 10 kg weight per day during 16 days (prolonged regime). **To delay or postpone oestrus:** 1/4 tablet per 10 kg weight per day during 30 to 40 days (normal regime) or 1/4 tablet per 10 kg weight per day during 30 to 40 days, then continuing with 1/4 tablet per 10 kg weight, twice a week, during a period not longer than 4 months (prolonged period). In the case of estrogen dependent tumors, one tablet per 10 kg weight per day during 5 days, then continuing with 1/2 tablet per 10 kg weight per day during 10 days or more. ■ **Female cats: For prevention or annulment of oestrus:** 1/2 tablet per day during 7 days, then continuing with 1/4 tablet, once or twice a week. **To delay or postpone oestrus:** 1/4 tablet during a period not longer than 2 months or 1/4 tablet once a week during a period not longer than 18 months. ■ **Dogs:** for hypersexuality: 1 or 2 tablets per 10 kg weight during 14 days (initial dose). In some cases, a maintenance dose of 1/2 tablet per 10 kg weight will be administered once or twice a week. **In perianal gland adenomas:** one tablet per 10 kg weight per day during 20 days or more. In prostate hypertrophy: One tablet per 10 kg weight per day, then continuing with 1/2 tablet per 10 kg weight twice a week. ■ **Cats: For hypersexuality:** 1/2 tablet per day during 7 days, continuing with 1/4 tablet per day during 14 days. A maintenance dose of 1/4 tablet may be indicated once or twice a week. **Miliary dermatitis:** 1/2 tablet per day during 7 days, continuing with 1/4 tablet twice a week until total cure is achieved. Eosinophilic granuloma: 1/2 tablet per day on alternate days up to initiation of regression, continuing with 1/2 tablet once a week until total regression.

SINGESTAR HI-JECT

Sterile, prefilled syringe. Atraumatic.

Contraceptive progestogen in injectable suspension for female dogs and cats.

FORMULA

Each ml contains: medroxyprogesterone acetate 50 mg, excipients and vehicle q.s.

INDICATIONS

Prevention or annulment of oestrus in bitches and female cats.

ADMINISTRATION AND DOSAGE

Apply 1 ml total per SC, only in the anestrus phase. To achieve an effective control in she-dogs, the treatment must be effected 20 to 30 days before the expected oestrus. In these animals, the treatment must be repeated every 4 to 6 months, according to the annual oestrus frequency.

■ **In female cats:** Administration must be carried out 3 to 6 weeks after the oestrus or a week after weaning of the kittens, both instances corresponding to the anestrus phase. It should be borne in mind that in a totally domestic environment, female cats may not present signs of the anestrus period. In these cases, the use of Singestar tablets is indicated.

DOMINAL COLLAR

External Antiparasitic Collar

FOR USE IN

DISTRIBUTION COUNTRIES

External antiparasitic for dogs and cats. The active ingredients are incorporated to the plastic matrix of the collar, as micro-particles that migrate to the surface continuously maintaining its efficacy in a sustained manner over a period of 3 months.

FORMULA

Contents per each 100 grams: Propoxur 12,00 grams; Imidacloprid 5,00 grams; Fenoxicarb, 1,00 grams, excipient q.s.

INDICATIONS

External antiparasitic destined to the prevention and treatment of the infestations by fleas tick and/or lice. The necessary dose is administered according to the weight of the collar and the size of the animal. It is recommended that the collar be changed every

ADMINISTRATION AND DOSAGE

Place the collar around the animal's neck and secure it after adjusting the size. Leave a space that allows the insertion of fingers, so as to avoid excessive tightness or too loose. Cut and discard the surplus piece. In the case of animals that are still growing, consider this situation, and allow a surplus to adjust the collar. Do not apply on puppies or kittens under two months old. Do not use on pregnant females. Remove the collar to bathe the animal and put it back on again when the animal is dry.

DOMINAL SOAP

Antiparasitic soap for dogs and cats.

+

FOR USE IN

+

DISTRIBUTION COUNTRIES

Antiparasitic soap for dogs and cats with cosmetic action; indicated for the weekly bath.

FORMULA

Contents per each 100 grams: Imidacloprid 0,30 grams;
excipient q.s.

INDICATIONS

Treatment and prevention of the infestations by fleas and lice
in dogs and cats.

ADMINISTRATION AND DOSAGE

Wet the animal with warm water. Rub on to the body in the direction of hair growth and contrary to hair growth, until obtaining abundant foam so as to facilitate product contact and penetration. Allow to act for 3 minutes. Rinse completely and repeat the operation. Allow to dry naturally.

DOMINAL MAX CATS

Antiparasitic with topical action and environmental effect for cats.

FOR USE IN

DISTRIBUTION COUNTRIES

Dominal MAX Cats is a topical application pulicicide solution for cats that incorporates the environmental effect. Dominal MAX Cats contains Imidacloprid and Fenoxicarb. Imidacloprid is characterized by its potent dumping power, responsible for the elimination of 100% of the fleas within 24 hours post-application. The Fenoxicarb provides residual power, due to its analogous action to that of the juvenile hormones of the flea, preventing the **maturing of eggs and larvae, eliminating same from the quarters without resorting to other additional products.**

FORMULA

Contents per each 100 mL: Imidacloprid 8,0 grams; Fenoxicarb 0,5 grams; excipient q.s.

INDICATIONS

Dominal MAX Cats is destined to the prevention and treatment of the infestations by fleas and lice.

ADMINISTRATION AND DOSAGE

Remove the spot-on from its pack. Maintain in a vertical position with the tip upwards and proceed to twist the point with your fingers and break it. Separate the animal's hair at the height of the base of the neck and apply the total contents of the spot-on directly upon

DOMINAL MAX DOGS

Antiparasitic with topical action and environmental effect for dogs.

+
FOR USE IN

+
DISTRIBUTION COUNTRIES

Dominal MAX Dogs is a topical application, pulicicide solution for dogs that incorporates environmental effect. **Dominal MAX Dogs** contains Imidacloprid, Permethrin and Fenoxycarb. Imidacloprid is characterized by its potent dumping power, responsible for the elimination of 100% of the fleas within the 24 hours post-application.. Permethrin provides the tickicide power. The Fenoxycarb furnishes residual power, due to its analogous action to that of the juvenile, hormones of the flea, preventing the eggs and larvae from maturing, eliminating same from the quarters without resorting to additional products.

FORMULA

Contents per each 100 mL: Permethrin 45 grams; Imidacloprid 10,0 grams; Fenoxycarb 0,5 grams; excipient q.s.

INDICATIONS

Prevention and treatment of infestations by fleas, ticks and lice. Repels flies and mosquitoes that transmit dirofilariasis (heart worm)

ADMINISTRATION AND DOSAGE

Remove the spot-on from its pack. Maintain in a vertical position with the tip upwards and proceed to twist the point with your fingers and break it. Separate the animal's hair at the height of the base of the neck and apply the total contents of the spot-on directly upon the skin. For dogs over 25 Kg. It is recommended that the application be made on two or three spots, separating the hair along the spine. Do not apply on cats.

DOMINAL POWDER

External antiparasitic powder. Effective against fleas, tick and lice.

External Antiparasitic for dogs and cats, that kills upon contact. It interrupts the cycle, preventing new re-infestations.

FORMULA

Contents for each 100 gr. : Propoxur 1,00 gram;
Imidacloprid 0,15 grams; excipient q.s.

INDICATIONS

It is indicated for the prevention and treatment of infestations by fleas, ticks and lice. Specially indicated for puppies and kittens owing to its low toxicity.

ADMINISTRATION AND DOSAGE

Sprinkle softly along the spine, groin and axilla. Spread with a massage on the hair coating, in a direction contrary to the hair growth. It is recommended that the procedure be repeated once

FOR USE IN

DISTRIBUTION COUNTRIES

DOMINAL SHAMPOO

Antiparasitic Shampoo. Hygiene and Cleanliness of the skin in dogs and cats.

External Antiparasitic, pulicicide, tickicide and pediculicides for dogs and cats, that kills upon contact.

FORMULA

Contents for each 100 mL: Propoxur, 0,165 gr; Imidacloprid, 0,150 gr; excipient q.s.

INDICATIONS

Indicated for prevention and treatment of infestations by fleas, tick and lice. It possesses an excellent cleansing power, leaving the skin and hair hygienic.

ADMINISTRATION AND DOSAGE

Wet the animal's hair with warm water and apply the shampoo; create abundant foam and rinse, Repeat the procedure and allow the foam to act for a few minutes before the last rinse. It is recommendable that the baths be repeated every 7 days but this frequency may vary according the veterinarian's suggestion. Do not apply on kittens or puppies under two months old.
